Project Name	Streamlining Ticket Assignment for Efficient
Maximum Marks	2 Marks

Customer Problem Statement :

Customer support teams often struggle with inefficient ticket assignment processes, where tickets are manually distributed or incorrectly routed, leading to delays, confusion, and uneven workloads among agents. This not only slows down response times but also affects the overall quality of customer service, causing frustration for both customers and support staff.

To address this, teams need a more streamlined and intelligent system that can automatically assign tickets based on factors like agent expertise, availability, and priority level. Such a solution would help reduce delays, balance workloads, improve resolution times, and ultimately enhance customer satisfaction.

.

1. I am	*Describe customer with 3-4 key characteristics - who are they?*	A **Support** Operations Manager juggling **multiple channels**, with a team of **varied skill levels.**
2. I'm trying to	*List their outcome or "job" the care about – what are they trying to achieve?*	Distribute incoming tickets to the **most qualified, available agent within minutes** to achieve faster resolution times.
3. but	*Describe what problems or barriers stand in the way – what bothers them most?*	Manual assignment is a time-sink; high-priority **tickets** are **missed**; certain **skill gaps** create **bottlenecks.**
4. because	*Enter the 'root cause' of why the problem or barrier exists – what needs to be solved?*	Lack of centralized agent **skill tracking** and an archaic, manual triage process that cannot keep pace with ticket volume.
5. which makes me feel	*Describe the emotions from the customer's point of view – how does it impact them emotionally?*	Constantly stressed, **overwhelmed**, and **frustrated**, fearing **SLAs** are **being** missed and service quality is **suffering.**

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer support manager handling a high volume of tickets	Assign tickets quickly and accurately to the right agents	The process is manual and time-consuming , leading to delays and errors	There is no automated system to match tickets with agent skills and availability	Frustrated and stressed due to inefficiency and poor team performance
PS-2	A support agent managing multiple customer issues	Resolve tickets efficiently and meet response time targets	Tickets are often misrouted or unevenly distributed	There is a lack of visibility into workload and no smart routing system	Overwhelmed and dissatisfied, affecting productivity and service quality
